

EASY AS 1, 2, 3

1 SET UP YOUR MEDIASTREAM PLAYER

Ensure you have access to the power button and that the player is properly ventilated. Connect the MediaStream player to the display/TV with an HDMI cable. Connect your Internet to the player with an ethernet cable. Now connect your MediaStream player to the AC power outlet. The player will automatically power on and connect to the Signera server. After a few minutes you will see an activation code displayed on the screen of the display/TV. **IF USING WI-FI**, the activation code will not display until you connect to Internet. To connect with wi-fi, attach a keyboard/mouse to the player. Press ESC to get to the Windows desktop and connect to your wireless network. Save wireless settings if needed. Your activation code will show on the display in a few minutes.

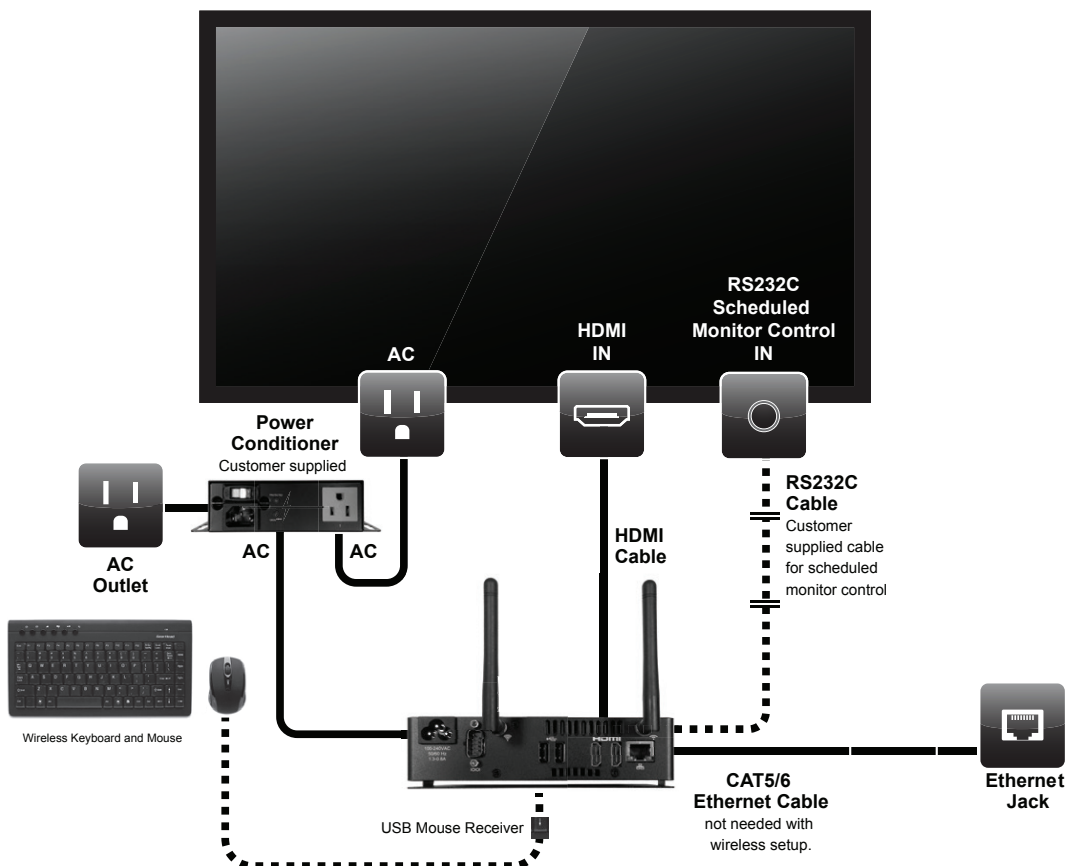

2 ACTIVATE THE MEDIASTREAM PLAYER

Write down, photograph or enter your activation code at a computer within sight of the display. Login to your Signera account (you must be an Admin User to activate players). From your 'My Dashboard' screen click on the tab 'Player Network'. Click on the 'Activate Player' button. Enter the activation code provided in Step 1. The code is case sensitive and is broken into sections. Choose a name for this MediaStream player (typically named by location). Sign type should be 'Discrete Premium Sign', unless this is not your first player activated and you want this player to clone one already installed or you are using a limited function player. After completing activation, you will be sent to a page to enter serial numbers and other information if desired.

3 ASSIGN A TEMPLATE

Click on the 'Player Network' tab. Click on the name of the MediaStream player. From the 'Default Frame' drop down menu choose your template. Your template should have been chosen previously or already in use within your System. If you need to choose a premade template or wish to have a custom template designed contact us at the number or email below.
